

AWS × IDFC × CAMPUS FUND — GRAND CHALLENGE 2026

The one workspace a Chartered Accountant opens every morning.

Indian CA practices run on memory, WhatsApp, and hope.

● Chasing clients for documents	About two follow-ups per client per collection cycle — during filing season this compounds firm-wide into hours of pure chase-work with no billable output.
● No single source of truth	Parallel Excel, WhatsApp, and email threads track “what's outstanding.” Past a certain volume, nobody trusts any one file as current.
● Compliance deadlines break down at scale	GSTR-1, GSTR-3B, and TDS filing dates tracked in a spreadsheet no one updates — one person is the entire calendar.
● The partner bottleneck	Every non-trivial review routes back to one senior person over email or chat — capping how much work a firm can take on, regardless of headcount.

Independently corroborated across CA-focused vendor blogs, G2/Capterra comparison pages, and ICAI's own submitted AI use-cases.

This isn't a niche pain — it's the default operating condition for Indian CAs.

~4–5 lakh

Practicing Chartered
Accountants in India

ICAI, 2025

1,00,000+

Registered CA firms
across India

ICAI data, via ETCFO

72%

of those firms are
single-partner practices

ICAI data, via ETCFO

A whole vendor category — **Optotax, Corpbiz, IRIS LMS, Turia, GST Notice AI** — exists purely to centralize GST/Income-Tax/TDS notices. That an entire industry sells one bolted-on fix is itself evidence the underlying practice tools leave this pain unserved.

Every existing tool solves part of this. None solve all of it.

Indian generalist practice mgmt	Zoho Practice, ATOM, Practive, Finexo	CRM, recurring tasks, GST/TDS/ITR reminders	Task list + reminders — little real intelligence
Western practice management	Karbon, TaxDome, Financial Cents, Canopy	Email-to-task triage, client portals, e-signature	Weak AI document parsing; pricing/complexity friction
India automation-only layers	Suvit, AI Accountant, Qosh AI	Strong bank-statement/invoice OCR into Tally	Narrow — no practice mgmt, no review workflow
Notice-management specialists	Optotax, Corpbiz, IRIS LMS, Turia	Centralizes GST/IT/TDS notices with deadlines	A separate tool bought on top of everything else

No single Indian tool combines AI document automation, structured review workflow, unified notice tracking, and client-facing transparency — at a small-firm price. That's the opening.

Vaelo today — a live product, not a pitch-deck mockup.

What's shipped

- Three deterministic, fully-audited report pipelines: CMA, Deal Feasibility, Financial Health Snapshot
- 69 passing automated tests, clean type-check — verified, not claimed
- Real generated report exports: PDF, DOCX, and XLSX
- Client management, document collection, review workflow, and a live “due today” dashboard — shipped and hardened
- Live marketing site at vaelo.co.in; founding-CA cohort recruitment underway

THE AUDITEDVALUE PATTERN

Every calculated figure carries its formula and its inputs, not just its value.

```
value:      ₹4,82,300
formula:    TNW - TOL
inputs:     traced to source rows
```

A CA can stand behind every figure they hand a bank or client — trace it back to why, not just what.

Report generation was the wedge.
The practice OS is the product.

AI stays assistive throughout — draft-and-confirm only. Never autonomous filing or unsupervised client messaging.

What would make Vaelo not just another practice-management clone.

01

Unified Notice Inbox

GST, Income-Tax, and TDS notices in one dashboard with response deadlines — today sold only as standalone point-solutions in India.

02

Auditability as a practice-wide discipline

Not just a compliance checkbox. Every task and every review comment traces back to the rule or figure that generated it — the same AuditedValue logic already proven in the report core.

03

CA and client, on the same data

Not a client portal bolted onto an internal tool. The CA's view and the client's view are the same underlying record, different lenses — shared from day one.

Built the way a CA would want their own numbers built.

- **Protected pipeline core**

New modules build outward around the audited report core — it never gets rewritten to fit a feature.

- **Row-level security, enforced**

Every table is firm- and client-scoped; caught and fixed a real cross-tenant access issue through our own review process before it ever reached a user.

- **Assistive AI, by design**

Draft-and-confirm only — never autonomous filing or unsupervised client messaging. Matches ICAI solicitation rules and DPDP Act obligations from day one, not bolted on later.

Priced for the 72% — solo and small CA practices, not enterprises.

PRICING

₹2,000

one-time software cost

+ ₹300–500 / month

scaled to the CA's workload

Why this works

- Matches the affordability bar of the 72% single-partner segment — no per-seat, VC-tool pricing friction
- One CA subscription covers unlimited clients — pricing scales with the practice, not the client list
- Priced to replace the real cost today: WhatsApp + Excel + memory, held together by hours of unbilled chase-work

Indicative pricing — not final, subject to change as we validate with the founding-CA cohort.

A phased build — shipping real workflows, not a big-bang rewrite.

Phase 1

SHIPPED

Client mgmt, document collection, client timeline, “due today” dashboard

Phase 2

IN PROGRESS

Compliance calendar, review queue, notice logging, billing, team/staff support

Phase 3

NEXT

AI-assisted document parsing, WhatsApp reminders, notice triage — always human-confirmed

Phase 4

AHEAD

Predictive deadline-risk detection, portal auto-fetch (feasibility-dependent)

Building in public, in front of the CAs we're building for.

- **Build in public**

Weekly LinkedIn and Instagram updates tied to real product progress — not a closed, multi-month build.
- **Founding-CA cohort**

Recruiting practicing CAs directly as early-access design partners, ahead of any paid launch.
- **Direct-to-CA marketing**

Reaching solo and small practices — the 72% of Indian CA firms — rather than chasing enterprise accounting departments.

One founder, building end-to-end.

Smeet Mehta

Solo Founder, Vaelo

- 3rd-year B.Tech CSE (AI/ML) student, Vellore Institute of Technology, Chennai
- Technical Lead at Jaguar Flow, an energy-drink brand
- Builds Vaelo end-to-end — product, engineering, and design — with an AI-assisted development workflow
- Operates under a “truth-over-hype” standard: every claim on this deck is something that's shipped, tested, or sourced — not projected

Vaelo isn't a report tool with features bolted on. It's the operating system a CA's practice runs on.

What we're looking for from Campus Fund

- Capital to fund Phase 2–3 build velocity
- Mentorship from operators who've scaled B2B SaaS in India
- Network access to deepen founding-CA cohort validation
